Filling out the form electronically

Download the application from your browser to adobe reader

a. To download Adobe Acrobat Reader, please go to https://get.adobe.com/reader/ it's a free PDF viewer

Open the application on adobe reader to fill it out

After completing your application, press save then email the application with your documents, to programinfo@get-cap.org from your email address.

Energy Saving Tips

You can do something to keep your summer electric bills at their lowest by following these simple steps.

- Thermostat setting: You can reduce your air-conditioning cooling cost by as much as 14% simply by increasing the thermostat setting by 1 degree. For energy conservation, we recommend a 78-degree setting.
- 2. <u>Insulation:</u> Insulation is designed to keep heat out during the summer and to keep heat m during the winter. Adequate insulation can more than pay for itself in just a few years, with money saved on air- conditioning and heating operation.
 - 3. Let it breathe: Dirty filters cause unnecessary strain and can lead to equipment breakdowns. Airconditioning servicemen say about half of their trouble calls are traced to dirty filters. We suggest changing or cleaning your filters at least once a month, preferably every two weeks for the best results.
- 4. Maintenance: Have your unit checked and cleaned each year to ensure maximum efficiency and long life. Have the coils checked and cleaned to see if they are dirty and check the refrigerant for charge and belts for wear and adjustments.
- 5. Efficiency: If your unit is 10 years old or older a new, properly sized, high efficiency system should be installed.
- Don't forget your ducts: You can save 5% or more on your atrconditioning costs by having your duct system checked for air leaks and for adequate insulation.
- 7. Attic ventilation: Attic temperatures sometimes rise to 140 degrees during the summer months. Good attic ventilation will lower the temperature and reduce

- cooling requirements inside the home.
- 8. Air leaks: You can save up to 10% on air-conditioning costs with a well-sealed house. Seal leaks around doors, windows, outlets, switch plates, and plumbing outlets. Weather stripping will make your home more comfortable too.
- 9. In the shade: If your house has a lot of windows, particularly on the east and west sides, you save money by shading the window with awnings, solar screens, or shutters. Trees and shrubs that shade your home also help to reduce the air-conditioning workload. Venetian blinds or drapes are helpful as well.
- Turn it on: By using kitchen and bathroom exhaust fans to remove excess heat and moisture, you can save each month on your overall cooling bill.
- 11. Lower is better: You can save money on your water heating bill by setting the temperature control at a moderate 140 degrees, or as low as needed, and still have plenty of hot water.
- 12. Up the chimney: If you close your fireplace damper during the summer and winter, (when not in use), you save on both your cooling and heating bills. Installation of a glass fireplace screen will also help prevent air from going up the chimney.

Attention: This is your copy, keep for your records.
